

# air**FLEX**<sup>HP</sup>

With a flexible design and high energy efficiency, our Air Flex HP is a perfect packaged air source heat pump solution.

*Innovation Through Heritage*

## About the Air Flex HP Range

**Air Flex is our modular AHU range, custom built to satisfy all project specific requirements. Air Flex combines industry leading performance with highly efficient energy consumption levels to achieve Part L2 Building Regulation compliance.**

Our Air Flex HP solution is constructed using the highest grade materials and components to ensure an operating life cycle.

## Air Flex HP Features

Renewable Energy Source

No external condensing units or refrigerant pipe work

No external CHW or LPHW mechanical services

Integral packaged controls with BMS interface

Heating and cooling from one source

Tempered air supply with no defrosting

Variable air volume fans and modulating digital scroll compressors

Pre-commissioned at factory

Reduced site installation time and cost

## Minimising Energy Consumption

The Air Flex HP range was developed with a focus on minimising energy consumption, significantly reducing the 'lifetime' cost and environmental impact of the product.
